Experience

Deloitte

Mar 2024 – Present

Software Engineer 2

Boston, MA

- Engineered and productionized mission-critical APIs for a Top 10 US Bank, supporting 10M+ daily requests at sub-100ms latency, directly powering high-volume trading workflows for Wealth Management clients.
- Led the decommissioning of a monolithic legacy COBOL trading pipeline, replacing it with a Java-based, AWS-hosted service architecture and eliminating a major source of operational risk and maintenance overhead.
- Reduced response times by 80% across core Wealth Management APIs (balances, positions, real-time trades) via Redis caching and multithreaded processing, increasing throughput under peak trading volume.
- Designed an SQS-based consumer architecture processing 10M+ daily trade events, improving system scalability and event-processing efficiency for downstream trading systems.
- Provisioned AWS infrastructure (SQS, ECS, Redis) using Terraform, enabling repeatable, version-controlled deployments and reducing environment setup time.

Cross Country Mortgage

Oct 2023 – Feb 2024

Software Engineer 1

Charlotte, NC

- Built third-party service integrations (credit check, e-signature) within a loan origination platform used by national clients, streamlining application processing and reducing manual handling in core financial workflows.
- Designed and implemented backend services in C and MongoDB on AWS, supporting scalable data processing for loan application workflows.

Ford Motor Company

May 2022 – July 2022

Software Engineer Intern

Dearborn, MI

- Built and validated mobile-compatible web applications in Angular for internal tools used by 175,000+ employees, improving cross-device accessibility for the Workplace Technology team.
- Integrated application performance monitoring using Spring Boot and Dynatrace, improving system observability and accelerating detection and resolution of production issues.
- Implemented reservation and scheduling logic in IBM TRIRIGA for an internal workspace booking system, enabling real-time desk and meeting room reservations across nationwide offices.

Innominds

May 2021 - July 2021

Software Engineering Intern

San Jose, CA

- Built a Python-based data analytics solution using logistic regression to predict disease risk from existing health conditions, supporting proactive, data-driven decisions within a patient engagement platform.
- Improved model accuracy on imbalanced healthcare datasets by implementing over- and under-sampling techniques, increasing reliability of risk predictions for downstream clinical use.

Ensurity Technologies

May 2019 - July 2019

Software Engineering Intern

- Designed and implemented a password-less authentication and encryption solution in C#, reducing reliance on traditional credentials and helping mitigate a major source of cyberattack risks.
- Contributed to the delivery of cross-functional software engineering projects, supporting design, development, and deployment to ensure timely execution of key initiatives.

Education

Purdue University

Bachelor of Science (GPA: 3.65 / 4)

Major in Computer Science, Minor in Mathematics

Conc. in Machine Intelligence

Technical Skills

Certifications: AWS Certified Solutions Architect, AWS Certified AI Practitioner, AWS Certified Cloud Practitioner, MITx Certified Verification of Python Programming

Languages: Java, Python, C#, SQL, JavaScript, C

Cloud & DevOps: AWS, GCP, Kubernetes, Terraform, Splunk, Dynatrace

Technologies: Spring Boot, ASP.NET, React, Angular, PostgreSQL

Accomplishments: Dean's List, Semester Honors
